- Klaten, East Java . Indonesian

EDUCATION

Stie Ykpn, Business School
Bachelor of Accounting
2023 - 2027 (Soon)

SKILLS

- Analysis: On-chain Data, Macro-Crypto Correlation, Financial Modeling.
- Programming: SQL & Python (Pandas, Numpy, Plotly, Seaborn)
- Marketing: Data-Driven Strategy, Copywriting, SWOT Analysis

LANGUAGE

Indonesian
English

PROFILE

Quantitative & Macro Research Analyst bridging exchange-level flow dynamics with buy-side thesis generation. I synthesize central bank liquidity filters, market microstructure data, and protocol mechanics into high-conviction investment memos and periodic publications. My framework delivers institutional-grade market intelligence to elevate fund market authority and support strategic capital allocation without on-site operational overhead.

EXPERIENCE

2024
-
2025

Naomediaagency

Marketing & Growth Strategist

- Strategic Growth: Deployed data-driven marketing and competitor analysis to optimize positioning and user acquisition.
- High-Signal Copywriting: Translated complex metrics into sharp, actionable narratives to drive retail community engagement.
- Conversion Optimization: Bridged quantitative data with retail psychology to accelerate organic platform growth.

The Strategic Moat : Research-Driven Growth for CEX

1. Tier-1 Institutional Benchmark (Goldman Sachs Standard)

- **Core Concept:** Borrowing Wall Street's playbook to build trust.
- **Explanation:** Top-tier investment banks command client trust and massive order flow through proprietary research. Replicating this institutional rigor elevates a CEX from a simple trading venue into an indispensable market intelligence hub.

2. Multi-Channel Execution Architecture

- **Core Concept:** Systematic, high-frequency publishing engine.
- **Explanation:** Publishing institutional analytics across Web, Telegram, and Discord:
 - **69 Macro Reports/Year:** Structured cadence covering Weekly Pulses, Monthly Liquidity, and Annual Outlooks.
 - **Token Listing Deep-Dives and 1 Year Performance:** Fundamental and on-chain analysis on newly listed assets to drive immediate trading volume.
 - **Trader Education:** Bridging crypto market mechanics with macroeconomic catalysts.

3. Dedicated Distribution Nodes (Telegram & Discord)

- **Core Concept:** High signal-to-noise community structure.
- **Explanation:** Structuring specialized research channels (e.g., #chart-traders, #daily-pulse, #project-listing). This establishes instant signal credibility, eliminates community noise, and creates direct pipes to retain high-net-worth traders.

4. KOL Syndication & Network Amplification

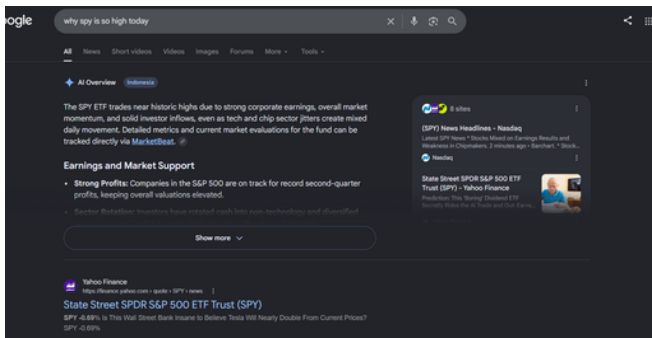

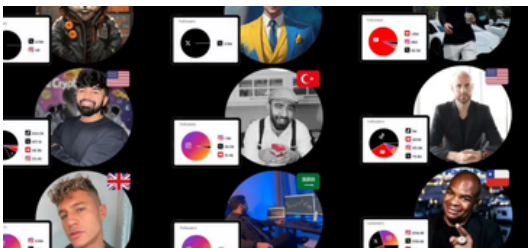

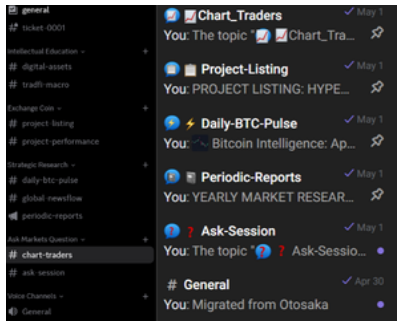

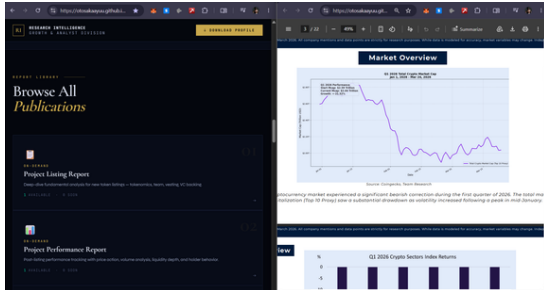

- **Core Concept:** Turning affiliates into research distribution nodes.
- **Explanation:** Arming global KOLs with white-labeled, data-backed research infographics rather than basic referral links. KOLs syndicate these reports across X, Telegram, and YouTube, turning audience engagement into active, high-conviction trading flow.

5. High-Intent Organic Search Capture

- **Core Concept:** Monetizing search volume at the point of intent.
- **Explanation:** Positioning research reports to rank top-of-page for asset-specific fundamentals and macro queries. Fully indexed reports act as inbound magnets, capturing active traders at the exact moment of commercial intent and converting them into account sign-ups.

6. Long-Term SEO Moat & CAC Reduction

- **Core Concept:** Defensible inbound acquisition over expensive paid ads.
- **Explanation:** Paid advertising for crypto exchanges is capital-inefficient and heavily restricted. Building a permanent organic SEO footprint via research creates an unshakeable inbound funnel—slashing Customer Acquisition Costs (CAC) by up to 85% while onboarding higher-LTV traders.

Keyword Variations			Questions			Keyword Strategy

Subject: Application: Research Analyst and Community Growth

Dear Hiring Team,

Exchange growth can no longer rely on mercenary sign-up bonuses. To build true **platform Life-Time Value (LTV)**, a CEX needs an architecture that predictably converts traffic into high-retention order flow.

I am applying for the **Research Analyst and Community Growth** to deploy a full-funnel, data-driven growth engine.

Rather than running isolated CRM campaigns, I bring a unified, capital-efficient system:

1. Acquisition (Paid Ads & SEO): Scaling highly-targeted Meta Ads funnels while leveraging programmatic SEO (research web hubs) to capture high-intent organic traffic and aggressively lower overall Customer Acquisition Cost (CAC).

2. Activation (Institutional Research): Publishing 69+ structured macro and post-listing analytics reports annually. This data acts as a direct trust-hook to convert new registrants into confident First-Time Depositors (FTDs).

3. Retention (KOL Syndicate): Arming top-tier KOLs with my proprietary quantitative research. They get premium content at zero cost; Your Exchange gets active trading discussions, higher referral volume, and targeted reactivation of dormant accounts.

Backed by custom data pipelines (Python, SQL), I am equipped to turn your user operations into a structural retention moat.

My live quantitative portfolio and operational hubs are available for audit here:

otosakaayuu.github.io/Thariqrahmanfadilla/

Pipeline Walkthrough: <https://www.youtube.com/watch?v=V1CSIKIXOzY>

I welcome the opportunity to discuss deploying this framework across the CEX user lifecycle

Sincerely,

Thariq Rahman Fadillah Applicant
